特点（C ）：

* L/W/H :5.0*5.0*1.6mm

Outline Dimensions(L / w / h):5.0*5.0*1.6mm

* : /

Luminous color and colloid:High brightness white / Yellow colloid

* ROHS

Environmental protection products Complied With ROHS Directive

* MSL :3

Moisture sensitivity level MSL : 3 levels

* EIA

EIA standard packaging

* SMT

Suitable for SMT automatic production

*

Suitable for infrared reflow soldering process

应用领域（P ）：

*

Indoor lighting

*

Auxiliary lighting

*

Advertising module lighting

*

Luminescent character

*

Counter lighting

*

Shop lighting

*

Jewelry display cabinet lighting

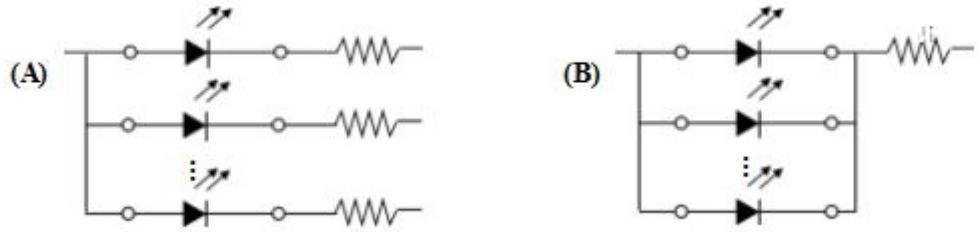
LED

A LED B

LED V_F LED

In designing a circuit, the current through each LED must not exceed the absolute maximum rating specified for each LED. In the meanwhile, resistors for protection should be applied, otherwise slight voltage shift will cause big current change, burn out may happen.

It is recommended to use Circuit A which regulates the current flowing through each LED rather than Circuit B. When driving LEDs with a constant voltage in Circuit B, the current through the LEDs may vary due to the variation in Forward Voltage (V_F) of the LEDs. In the worst case, some LED may be subjected to stresses in excess of the Absolute Maximum Rating.



LED LED

Thermal Design is paramount importance because heat generation may result in the Characteristics decline, such as brightness decreased, Color changed and so on. Please consider the heat generation of the LEDs when making the system design.
